SYSTEM SYLVERE BARINDA

SOFTWARE ENGINEER | FULL-STACK DEVELOPMENT

Kigali, Rwanda | +250 786 885 060 | systembarinda@gmail.com
GitHub: https://github.com/system-Barinda | LinkedIn: Not provided | Portfolio: Not provided

PROFESSIONAL SUMMARY

Aspiring Software Engineer and IT student with intensive software-development training and hands-on team-project experience. Trained in modern JavaScript and TypeScript development, React, Node.js, NestJS, REST API design, authentication and authorization, PostgreSQL, automated testing, Git workflows, and Agile/Scrum collaboration. Interested in building reliable, maintainable applications, learning from experienced engineers, and contributing to collaborative software teams.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, PHP, Python
Frontend: React, HTML5, CSS3, Tailwind CSS, React Router, Redux, React Context
Backend & APIs: Node.js, NestJS, Express, REST APIs, client–server architecture
Databases: PostgreSQL, MySQL, MongoDB
Testing & quality: Jest, unit testing, integration testing, Cypress (as provided), linting, code reviews
Tools & delivery: Git, GitHub, Docker, Postman, GitHub Pages, Netlify
Engineering foundations: OOP, data structures and algorithms, authentication, authorization, clean-code practices

EXPERIENCE & TRAINING

Software Development Trainee / Full-Stack Project Intern
The Gym, Rwanda | January 2025 – August 2026

- Completed Phase I / Core Skills Training in a one-year software-development trainee programme, graduating in 2026.
- Worked on collaborative software projects across frontend and backend tasks, applying JavaScript/TypeScript, React, Node.js and NestJS concepts.
- Practised REST API creation, client–server architecture, authentication and authorization, and PostgreSQL fundamentals.
- Collaborated through Agile/Scrum practices, task breakdown, Git commits, pull requests, code reviews, pair programming and team communication.
- Studied automated testing and quality practices, including Jest, unit testing and integration testing; deployed web projects using GitHub Pages and Netlify.

SELECTED PROJECTS

Road Safety Game
Live demo: https://africa-map-builder.vercel.app/
Interactive road-safety game created as a team project. Presents road-safety gameplay and encourages players to make safer driving decisions. Add your exact technical contribution and stack before applying to roles that require project details.

LIBRA
GitHub: https://github.com/system-Barinda/LIBRA
Software project hosted on GitHub. Add a one-sentence description of its purpose, key features, and your individual contribution to make this entry stronger.

Car-Sharing Backend API
Repository/link: available on request
Backend project involving car-sharing functionality. Relevant areas of work include API endpoints, request validation, database integration, authorization and automated tests where implemented.

Energy Access Explorer Mapping Interface
Repository/demo: available on request
Mapping-interface project focused on making energy-access and crop-suitability analysis easier to explore through a user-friendly web experience. Specify the exact features completed and technologies used.

EDUCATION

RP-Tumba College — Bachelor’s Degree in Information Technology (ongoing) | 2024–2027 (expected)
Relevant study: programming fundamentals, system design, and IT infrastructure.

Secondary education — Computer Applications (Level 3); Software Development (Levels 4–5)
Add the school name and attendance dates if you want this entry to be more specific.

LEADERSHIP & COMMUNITY

Member, African Youth Leadership Forum (AYLF) — participates in leadership development focused on preparing people to become responsible leaders and contribute positively to the future. Add dates and specific activities or outcomes if available.

PROFESSIONAL SKILLS

Communication; teamwork and collaboration; problem-solving; adaptability; accountability and ownership; continuous learning; time management.

LANGUAGES

Kinyarwanda — Fluent | English — Excellent (self-assessed) | French — Basic
